www.itgovernance.co.uk

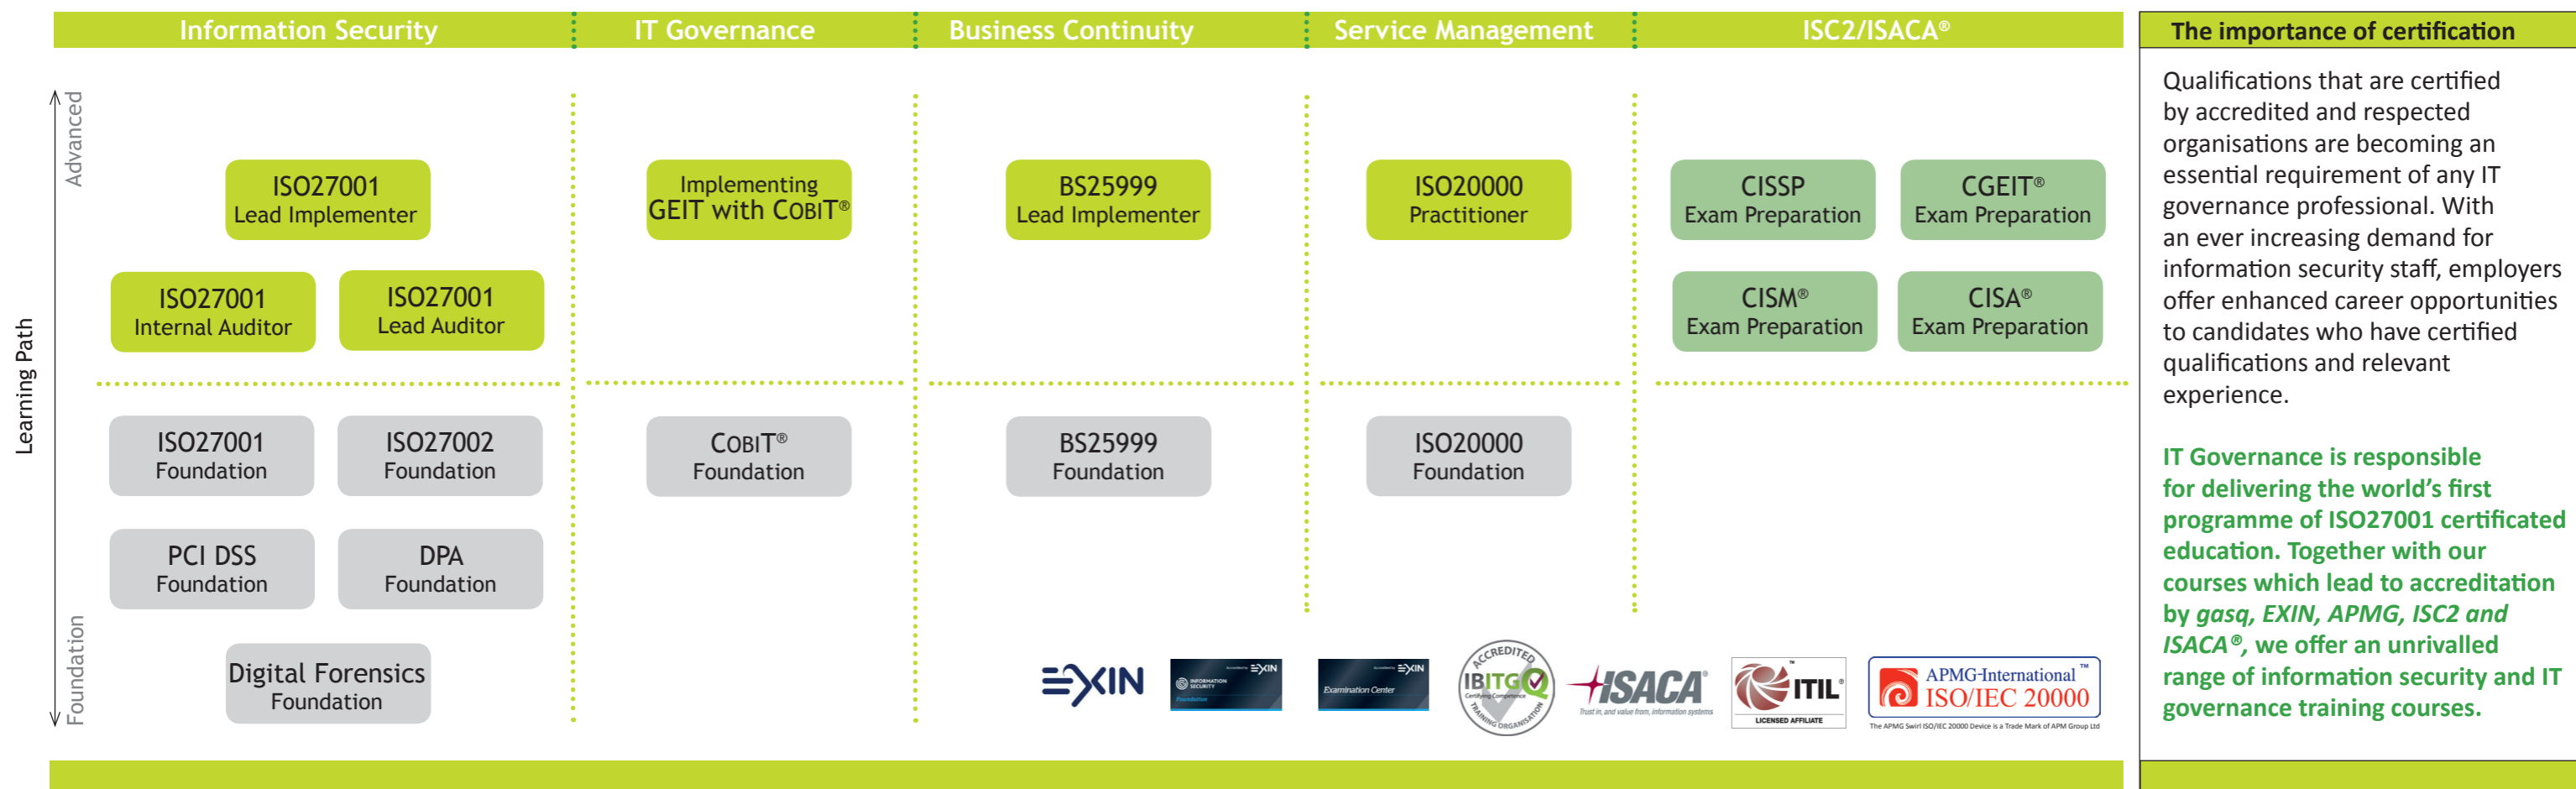

‘The course was succinct, well structured and delivered. A must for anyone thinking about managing their own ISMS’

Andrew Watson, Motivano

‘An excellent course with clear overview of ISO27001 standard, highly recommended for anyone considering this standard.’

Mike Doyle, IT Manger, Axiom Manufacturing Services

IT Governance training sectors

Information Security

ISO/IEC 27001:2005 is the most widely recognised specification that helps businesses and organisations throughout the world develop a best-in-class Information Security Management System (ISMS). Knowledge and experience in implementing and maintaining ISO27001 compliance are considered to be essential to building a successful career in information security.

Foundation Level

Introductory training to raise awareness and build knowledge and understanding.

Advanced Level

Focused on developing the in-depth knowledge and skills required to implement and deliver information security management to an organisation. Includes a dedicated Lead Auditor Course for delegates who wish to develop a career as an ISO27001 Lead Auditor or independent consultant.

ISO27001 Certified ISMS Lead Implementer

IT Governance Ltd. is particularly known for the ISO27001 Certified ISMS Lead Implementer Course which is acknowledged by our customers as the most comprehensive in the UK. This course was devised by the IT Governance Directors, Alan Calder and Steve Watkins who are the joint authors of IT Governance: *A Manager's Guide to Data Security and ISO27001/ISO27002*. This text book is also a compulsory 'set book' for the Open University Postgraduate Course in Information Security Management.

Alan Calder and Steve Watkins were responsible for the first implementation of the BS7799 Standard (later to become ISO27001) in the UK in 1996.

The ISO27001 Certified ISMS Lead Implementer was the first course accredited by *gasq* as meeting the International Board for IT Governance Qualifications (IBITGQ) requirements.

IT Governance

COBIT® has become one of the internationally accepted best practice frameworks for IT governance and control in successful organisations. Our COBIT® Training Programme is designed to support the growing need in the UK for skilled and certified COBIT® practitioners. With a Foundation and Advanced Level Course, this programme provides an integrated 'learning path' to enable the organisation to fully benefit from the implementation of COBIT® and enables the individual to obtain a recognised *ISACA*® qualification.

Business Continuity

BS25999-2:2007 is the international Standard for business continuity within organisations, and defines best practice for developing and implementing a robust business continuity plan. The concept that an organisation's systems and processes should be resilient against outside attack or natural disaster is a key principle underpinning the implementation of the ISO27001 Standard.

Service Management

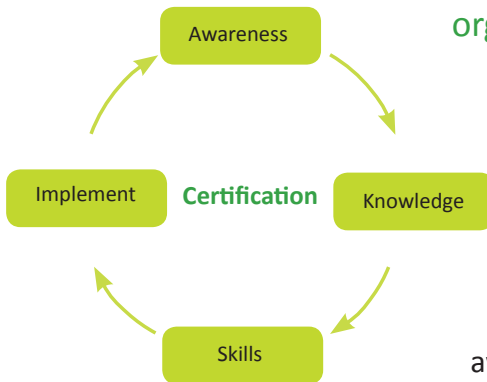

ISO/IEC 20000 is the first international standard for IT service management and defines the best practice for the delivery of managed services to meet the needs of an organisation and its customers. Originally developed to reflect best practice guidance contained within the ITIL® framework, ISO20000 equally supports other IT Service Management frameworks including Microsoft® Operations Framework and COBIT®.

CISSP, CISA®, CISM® and CGEIT® exams preparation

ISC2 and ISACA® awarded certifications are globally accepted with the CISSP, CISA®, CISM® and CGEIT® qualifications already recognised as a 'must have' requirements for a career in information security, audit and IT governance management.

Our approach to training

The IT Governance training programme is built on the foundations of our extensive practical experience of designing and implementing management systems. We deliver the highest quality education to delegates from commercial and public sector organisations.

The development of our training programme draws on our 'real-world' experience to provide a range of courses which are specific to the learning objectives of the topic concerned, but broad enough in scope to provide an integrated and progressive 'learning path' for all delegates.

Our training services are designed to provide delegates with the awareness, knowledge, certification and skills required to implement the compliance and best practice associated with IT governance standards.

Why choose IT Governance for your training needs

- The first training programme of ISO27001 certified education
- Practical hands-on approach delivered by experienced practitioners
- Acknowledged leader in ISO27001, Information Security Management and Business Resilience training
- Fully integrated and structured learning path with foundation and advanced levels
- Focused on improving knowledge, developing skills and awarding certification
- Training centres based in London and Manchester
- Guaranteed booking – we will never cancel any of your courses

What our customers think ...

'From initial contact to request a quote right to the end of the course, IT Governance have delivered well above expectations. Thank you for an excellent three days !'

Lydia Portbury, ISIS Risk Manager, Essex County Council

'The course exceeded all my expectations and has provided the knowledge I need to plan the implementation of ISO27001 in my organisation.'

Richard Thomson, IT Manager, Apex Trust of Scotland

'The course enables me to complete a BCP to a higher quality with greater assurance.'

Antony Green, IT Manager, Raven Housing Trust Ltd

'Excellent tutor, great facilities & lovely environment. Made complex subject easy to understand. The best Data Protection course there is.'

Jonathan Pillinger, Senior Associate, Corporate Compliance, Postcomm

'Met all my expectations. Good introduction to COBIT® 4.1.'

Peter Burt, Selex Galileo
